

TORONTO, ONTARIO – JULY 18, 2024

SRC Announces 2024 Exploration on Ballarat Gold Project, Yukon

Stakeholder Gold Corp. (TSXV: SRC) ("Stakeholder" or the "Company") is pleased to announce commencement of the 2024 exploration program on the Company's 100% owned Ballarat Gold Project covering 18,741 Ha in the Heart of the White Gold District of the Yukon Territory, Canada.

The 2024 summer exploration program on Ballarat is designed to provide further information on gold and copper anomalies first identified in 2016 and then subsequently confirmed with more extensive testing during the 2023 exploration season. Highlights of the 2023 program include:

- Identification of two distinct, subparallel, anomalous gold in soil trends of 1.9 km and 1.3 km on the Skye Zone, extending west-southwest off the route proposed for the Northern Gateway Road.
- Detection of multiple further spot gold anomalies associated with ridge and spur samples, located west and east of Ballarat Creek several km south of the Skye Zone.
- Identification of a 500 m wide zone of anomalous copper ridge and spur samples associated with a Jurassic aged intrusive unit; now called the Loki Zone, east of Ballarat Creek.

"Our objective in 2024 is to confirm the significant potential of both the Skye Zone gold target and the Loki Zone copper target on the Company's 100% owned 18,741-hectare Ballarat Project located in the Heart of the White Gold District." Stated Christopher Berlet, CEO of Stakeholder. "Of note, is that both targets are located only a few hundred meters, west and east respectively, from the proposed route for the Northern Gateway Road which traces for more than 17 km north-south through the center of company claims."

– Christopher Berlet, CEO

2024 Exploration Program

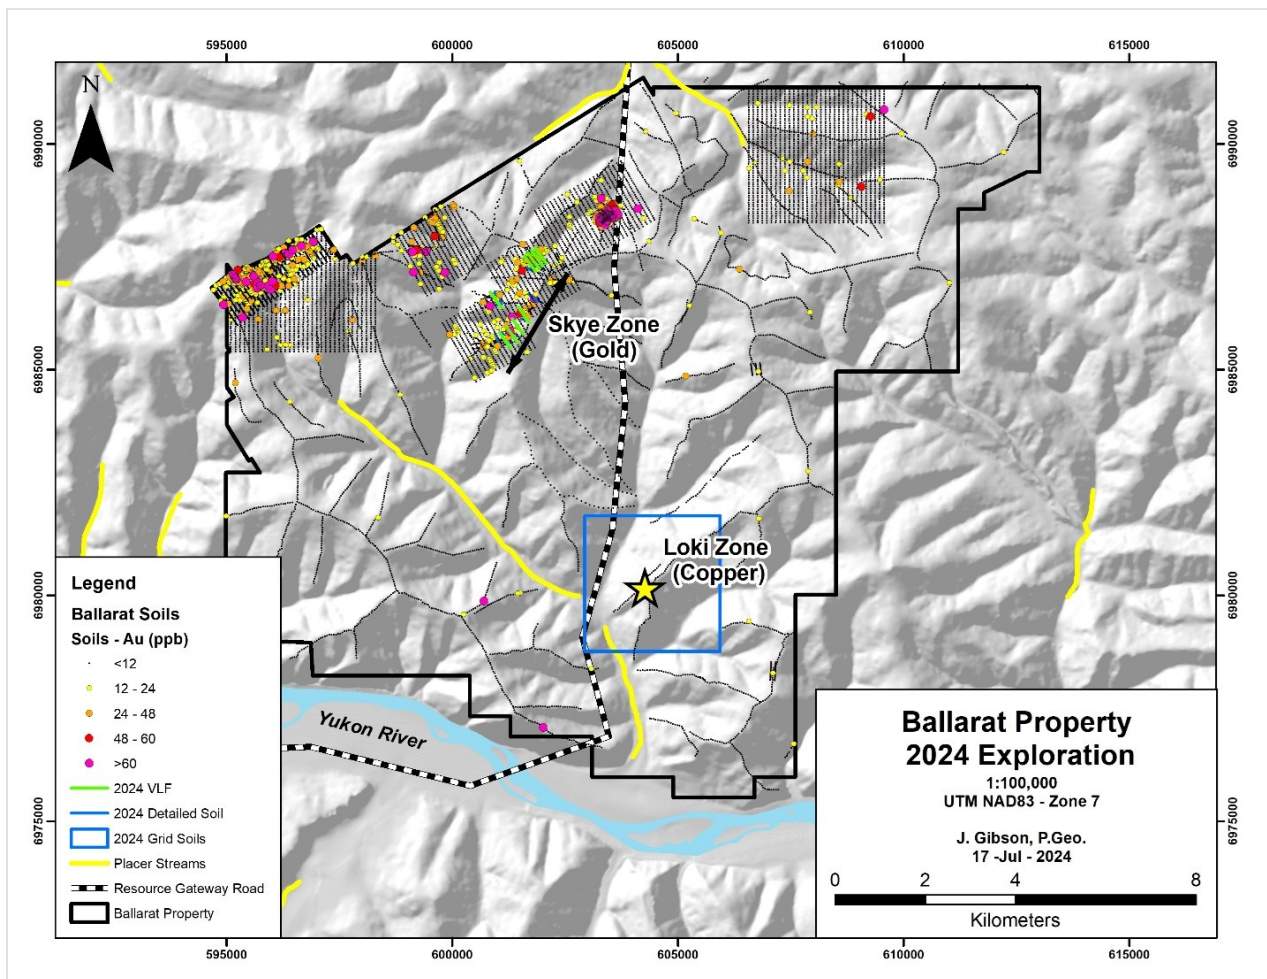

The 2024 exploration program will include grid soil sampling, ground-based VLF surveys, geological mapping and prospecting, and a drone magnetic survey. The work will focus on the Skye Zone and newly discovered Loki Zone, conducted by GroundTruth Exploration Inc. from Dawson City, YT, anticipated to begin in late July 2024.

Skye Zone: High-resolution soil sampling, VLF surveys, and geologic mapping across the two NE-SW trending, subparallel, gold in soil anomalies up to 1.9 km in length, potentially structurally controlled targets similar to the Golden Saddle deposit located ~32 km to the northwest.

Loki Zone: Grid soil sampling and geologic mapping and prospecting to define the extents and nature of the copper anomaly, which lies on the northern margin of a Jurassic aged intrusive unit and may have potential for porphyry style mineralization.

Drone Magnetic Survey: A property scale drone magnetic survey using the MagPlane, a fast unmanned magnetometry system with a maximum velocity of over 80km/hr, integrating a boom-mounted magnetometer with an advanced laser altimeter.

Ballarat Property

The Company's 100% owned, 18,741-hectare, contiguous claim position covers key ground features in the center of the rapidly evolving White Gold Mining & Exploration District, north and northeast of Newmont's Coffee Gold Project, due north of Western Copper and Gold Corporation's Casino Project.

Analytical work for the 2024 program will be performed by Bureau Veritas Commodities Canada Ltd. at its Vancouver, British Columbia laboratory, including a full quality assurance / quality control program. Jodie Gibson, M.Sc., P.Geo. is the Qualified Person for the Company, as defined by NI 43-101, and has reviewed and approved the contents of this press release.
